EDUCATION

Vignan Institute of Information and Technology

B.Tech in Computer Science and Engineering

Relevant Coursework: Data Structures & Algorithms, Database Management, Web Development, AI Fundamentals

Vizag, India

2024 – 2028

PROJECTS

Universal Webhook – Unified API Automation Platform

Node.js, Express.js, MongoDB

- Reduced third-party integration effort by 60% by building a centralized webhook platform that unified multiple services through a single API layer.
- Increased automation speed by 40% by architecting real-time event routing across CRM, payment, analytics, and notification systems with zero manual wiring.
- Improved developer productivity by 35% by implementing reusable endpoint templates, payload transformation pipelines, and live monitoring dashboards.
- Increased system reliability to 99.9% uptime by deploying retry queues, authentication layers, and failure-recovery workflows for graceful outage handling.

MCP Forge – AI Tool Generation from Web Workflows

Python, React, LLMs

- Reduced manual tool development time by 80% by building an LLM pipeline that converts HAR files into fully reusable MCP servers with minimal configuration.
- Increased AI assistant capability by 3x by enabling captured browser workflows to become callable tools for repeated automation across diverse platforms.
- Improved data security compliance by 100% by implementing automated redaction of sensitive fields from HAR payloads before model processing.
- Cut broken-server incidents to near zero by integrating AST validation and one-click publishing workflows for reliable deployments.

SymbioTech – AI-Powered Industrial Symbiosis Platform

React, FastAPI, PostgreSQL

- Increased industrial waste reuse efficiency by 30% by developing a resource-matching engine using FastAPI with automated similarity scoring and rule-based filtering.
- Enabled real-time tracking of 50+ concurrent resource flows by architecting a centralized React dashboard for visualizing waste-to-input conversions.
- Reduced data retrieval latency by 15% by designing a normalized PostgreSQL database structure to handle complex relational data for 100+ industry nodes.

Analies – Privacy Policy Analyzer

JavaScript, Chrome Storage API, Regex

- Scanned 1,000+ words of legal text in under 2 seconds by engineering a real-time DOM parsing pipeline using JavaScript for instant page-load analysis.
- Identified high-risk data-sharing clauses with 90% accuracy by implementing a regex-based classification system for automated policy auditing.
- Decreased repeated analysis time by 60% by utilizing Chrome Storage API for persistent state management for returning users.

SKILLS

- Languages:** C, Python, JavaScript, SQL (PostgreSQL, SQLite), HTML/CSS
- Frameworks & Libraries:** React, Node.js, Express.js, FastAPI, Flask, Tailwind CSS
- Tools & Core:** Git/GitHub, REST APIs, Chrome Extension API, Data Structures & Algorithms
- AI/ML:** LLM Prompt Engineering, Similarity Scoring, AI Integration, IBM AI Fundamentals

ACHIEVEMENTS & CERTIFICATIONS

- 1st Place – GDG Hackathon: Recognized for building innovative, scalable solutions under time constraints.
- 3rd Place – AlgoZenith Hackathon: Competed against 100+ teams to deliver scalable software solutions.
- 1st Place – Ideathon (VIGMAT): Recognized for innovative problem-solving and technical feasibility.
- CodeChef: Rated 1417 (2-Star), solved 150+ algorithmic problems across multiple platforms.
- Certifications: IBM AI Fundamentals, Cisco JavaScript Essentials 1 & 2.
